REP. WITTKÉ STATEMENT ON EVERS FOXCONN 'DOWNSIZE' "What is Governor Evers thinking?"

Madison – "I have every confidence that Foxconn will deliver on its employment and investment benchmarks. Governor Evers needs to stop fixating on the number 13,000 and get a full understanding of the impact this development is having on our community and the state overall. He would be better served listening to Racine County local officials and local constituents as to the jobs and ongoing economic benefit Foxconn promises.

In a community that has stagnated and felt high unemployment rates for the past several years, Foxconn is proving the agreement is no 'one-hit-wonder'. Local contractors, restaurants, coffee shops, medical facilities, manufacturers and more will grow because of Foxconn. Finally, Racine County will enjoy an economic growth advantage. Today as the Foxconn campus moves forward, from road construction to groundbreaking for new structures, we in Racine County are having a positive experience with the agreement made with Foxconn. But their investments won't end at the Racine County line as more education and public-private partnerships for long term success are developed throughout Wisconsin.

The governor continues to show his lack of understanding of the financial aspects of this project. If Foxconn does not achieve the employment and investment benchmarks in the agreement, they won't realize incentives. The taxpayers of the state are protected."

Give us your thoughts on the Foxconn development?
